

Dear FCC friends:

Hope you at the FCC have seen tests conducted by the ARRL (and others around the world) and watched the videos/sound on the RFI produced by this BPL. This is real stuff, not just talk. It is clear that the BPL pushers are a bunch of money hunters at the expense of hurting other services. In this particular case, a national resource like ham radio.

Please, please, don't let this happen. Don't let the crude capitalism of some destroy from inside out this beautiful nation and its resources.

Can't they use frequencies in the cable tv spectrum?
